To Whom It May Concern:

This letter is in reference to Dr. Ronald Bell and his Master Builders Program. Dr. Bell presented his program to our students in grades 3-8 to help us "jump-start" our school year. The students worked together with an enthusiasm that I have not witnessed before. The entire staff was amazed and, to say the least, very impressed. Our middle school Language Arts teacher didn't think the program would be pertinent to her or her subject area. She was the first to tell me how wrong she was and how great she thought the program was.

We were so impressed with Dr. Bell, we have arranged to have him come back in October to train our entire instructional staff to implement the Master Builders Program in our school. The staff is very excited, and has already begun to plan how the program will be delivered.

I highly recommend this program to any school that needs to build excitement about math, science, engineering, or character education. The great byproduct is teaching students how to work together and compliment one another. This will greatly enhance the morale of the entire campus including all students and staff. Again, Dr. Bell hit a home run with our students and staff. I highly recommend him and his program to you.

Please do not hesitate to contact me if you have any other questions or concerns.

Sincerely,

Gary W. Chandler  
Superintendent
